

WEB INTERFACE FOR CDS/ISIS

GENISISweb

VERSION 3.0.0

©Deepali Talagala, General Secretary,
Sri Lanka Library Association
Colombo

July 2003

PREFACE

I would like to thank Mr. David Storti for his excellent workshop held in Bangkok in 2001. Also Dr. Susanne Ornager, Adviser for Communication and Information in Asia and the Pacific, UNESCO, for organizing this workshop. The knowledge gained at this workshop inspired me to use this web interface.

I have used the latest version GENISISWEB 3.0.0 for this manual. But I have not included many new features, which I intend to do as soon as possible. The new version has many features which would make the librarian's/ information officer's life easier in providing their databases on the web. Even with an average knowledge on software usage any one may be able to make use of this software.

It is really admirable the assistance rendered by UNERSCO for the developing countries in the development of Library Information Services.

Deepali Talagala

July 2003

01. Introduction

GENISIS is an authoring software (for Win32) for visually producing web forms to query CDS/ISIS databases. There are two versions of the tool: GenisisWeb, for web publishing and GenisisCD for developing CDROM interfaces for CDS/ISIS databases. CDS/ISIS is an advanced non-numerical information storage and retrieval software developed by UNESCO since 1985 to satisfy the need expressed by many institutions, especially in developing countries, to be able to streamline their information processing activities by using modern (and relatively inexpensive) technologies.

Genisis was originally developed by the former IBISCUS Association (France) for UNESCO and it is now available free of charge on the UNESCO FTP site. The software is written in Microsoft Visual Basic. Its source code is also freely available. A new release of GENISIS, the authoring software for visually producing search interfaces for CDS/ISIS databases, is now distributed on UNESCO's CDS/ISIS webpage.

<http://www.unesco.org/isis/files/winisis/genisis/web/genisisweb.exe>
<http://www.unesco.org/isis/files/winisis/genisis/cdrom/genisiscd.exe>
<ftp://ftp.unesco.org/pub/winisis/genisis/web/>

GenisisWeb now supports CSS (Cascading Style Sheets) and has an improved CDS/ISIS print format wizard that makes it easier to link records to each others. GenisisCD works also over HTML pages but includes its own search engine and may produce a fully fledged CD, including: installation program, autorun, HTML help, totally customizable interface logos etc. GenisisCD will prepare the CD that will then possible to burn using your favorite CD writer software. Available interface languages: English and French.

Genisis, basically implements the following steps:

1. the web query form (with field selection and index access);
2. the display of query results;
3. the display of a particular record's details;
4. test the application;

For testing the generated application with GenisisWeb, will require the use of a local web server such as Apache web server.

Finally, depending on which version of GENISIS you are using, it is possible to export the generated application to a real internet/intranet server (Windows, Unix, Linux) or to prepare the structure of the CDROM for the copy. GENISIS is based on the Web CDS/ISIS interface WWWISIS by BIREME.

02. Installation of Apache web server

Apache web server is distributed with the CDS/ISIS official CD in. To install Apache insert the CD when you get the auto run screen (Fig. 01) click on this icon and go to folder cds-isis\internet\genesis\websrv.

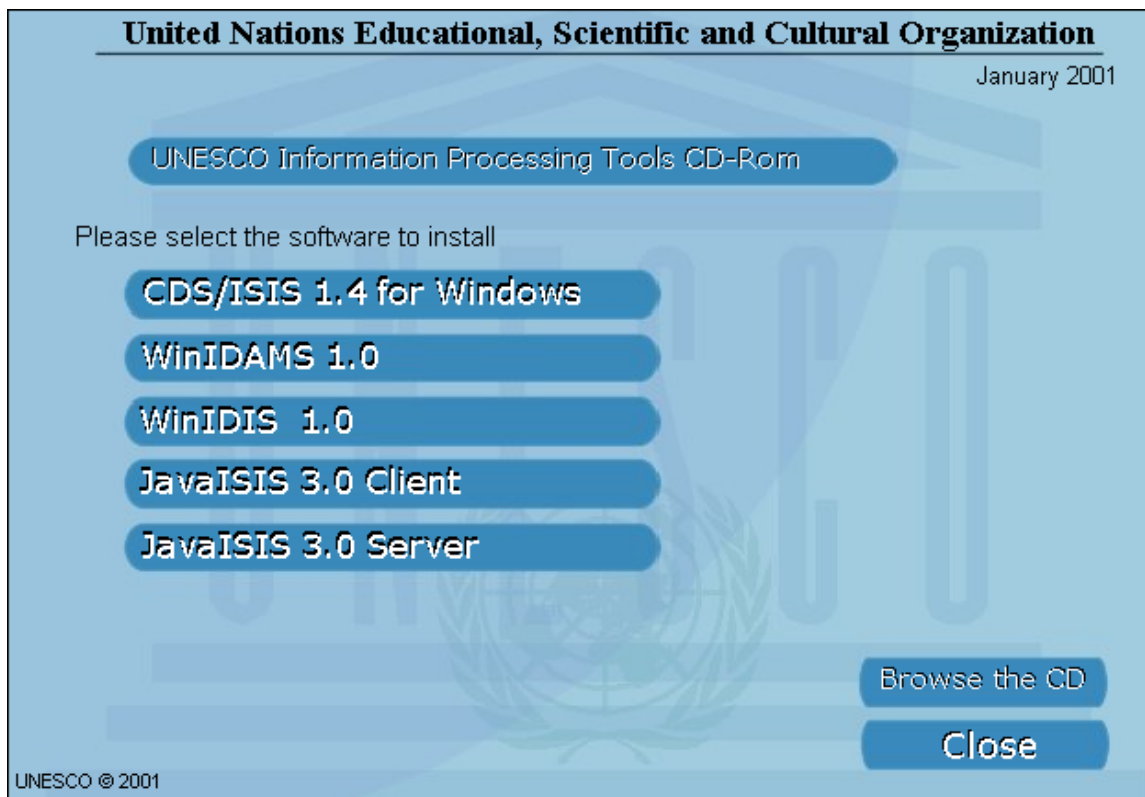

Fig. 01

Then double click on

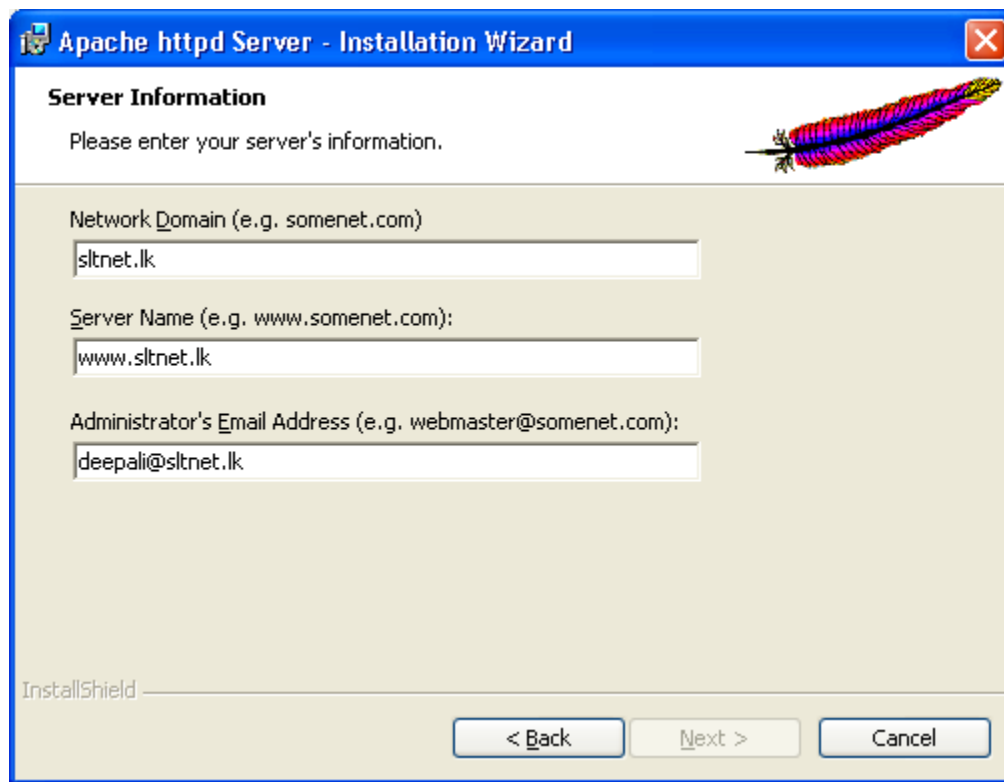

apache_1.3.17-win32-no_src
Windows Installer Package
1,756 KB

and installation of Apache will start.

Click on next button

until you get this screen (Fig. 02).

Apache httpd Server - Installation Wizard

Server Information

Please enter your server's information.

Network Domain (e.g. somenet.com)
sltnet.lk

Server Name (e.g. www.somenet.com):
www.sltnet.lk

Administrator's Email Address (e.g. webmaster@somenet.com):
deepali@sltnet.lk

InstallShield

< Back Next > Cancel

Fig. 02

Here you have to give a domain name, server name and email address. These doesn't need to be real, you can give any name in the format shown above.

Once Apache is installed GenISIS can be installed.

03. Installation of GenISIS

When you download the GenISISweb file from the UNESCO website you have to unzip this file.

Double click on it and give the path here (fig. 03) where you want to copy the files so that the file will be decompressed.

Click on the

button

“Decompresser”

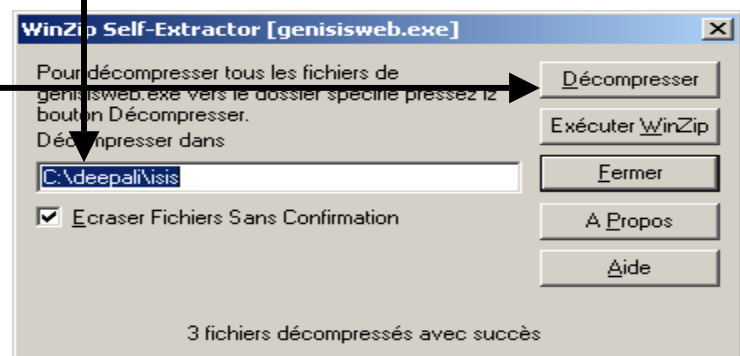

Fig. 03

Then you will get these three files (Fig. 04). Dou

Then the installation for GenISIS programme will

Fig. 04

When GenISIS starts installation the first screen you will see is this (Fig. 05).

Click on **OK** button

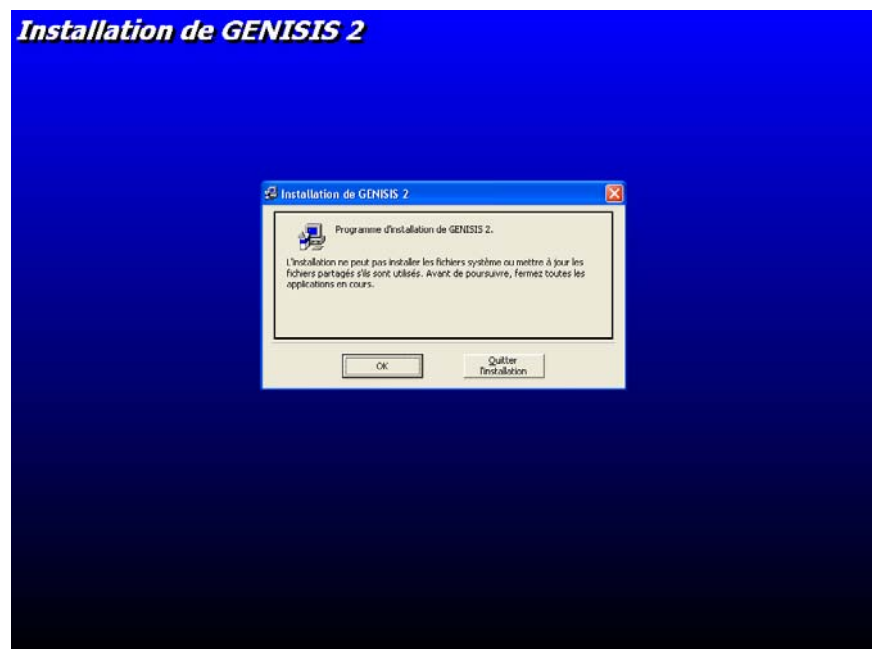

Fig. 05

Then You will
get this screen
(Fig. 06).

Click on this
button

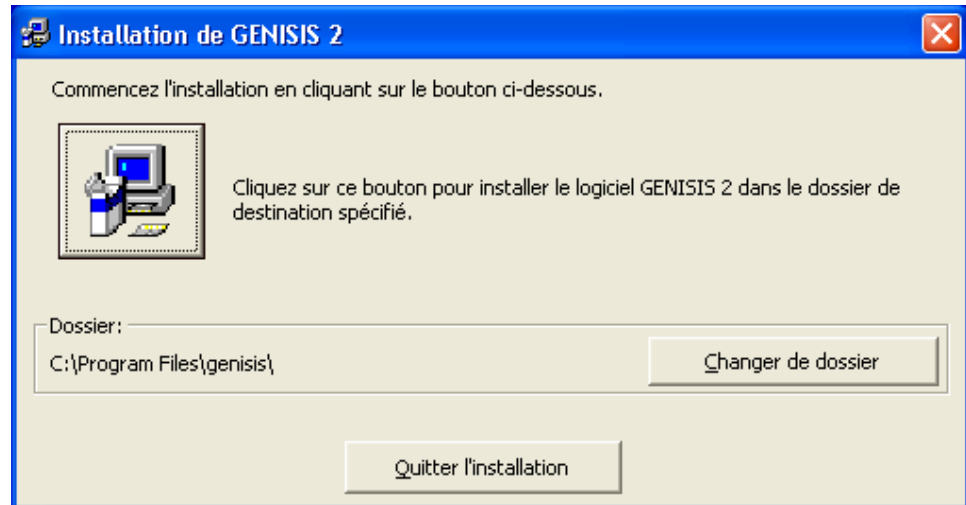

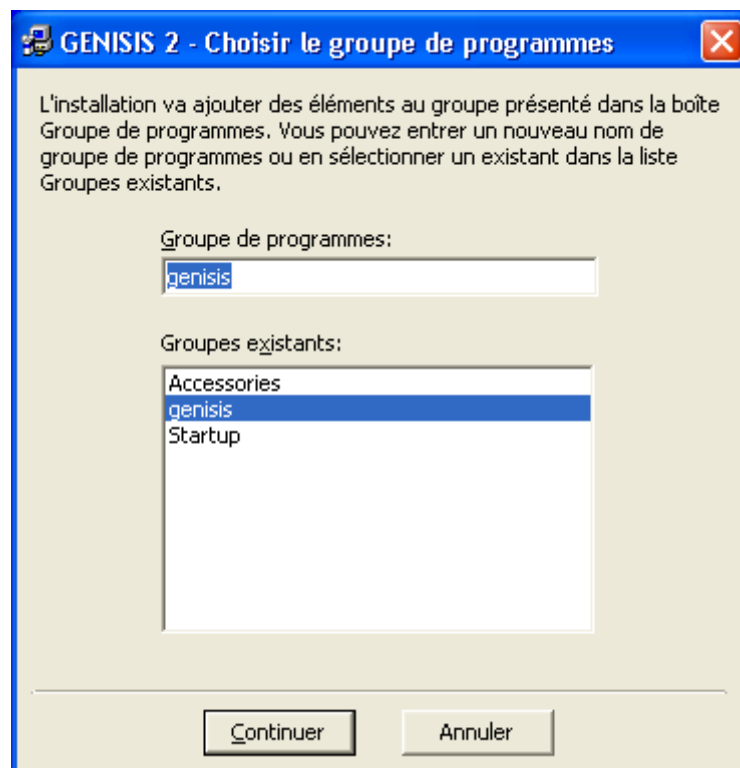

Fig. 06

Then you will get this
screen (Fig, 07) Click on
the button

Fig, 07

Finally you will get this.
Then click on **OK** button.

At this point you have installed the web serve Apache and the GenISIS web interface.

The file structures of Apache and GenISIS will be like this (Fig. 08)

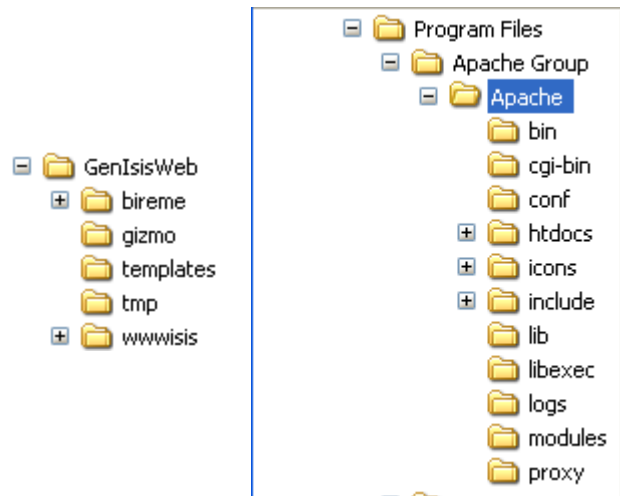

Fig. 08

Before you start using

the GenISIS programme copy the following files.

Copy the "wwwisis" folder in GenISIS to "htdocs" folder in "Apache".

Copy all files in the "bireme" folder in "GenISIS" to the "cgi-bin" folder in Apache

04. Starting Apache web server

Before you start GenISIS you have to run the Apache web server. To start Apache Follow the steps shown below (Fig. 09).

Click on START

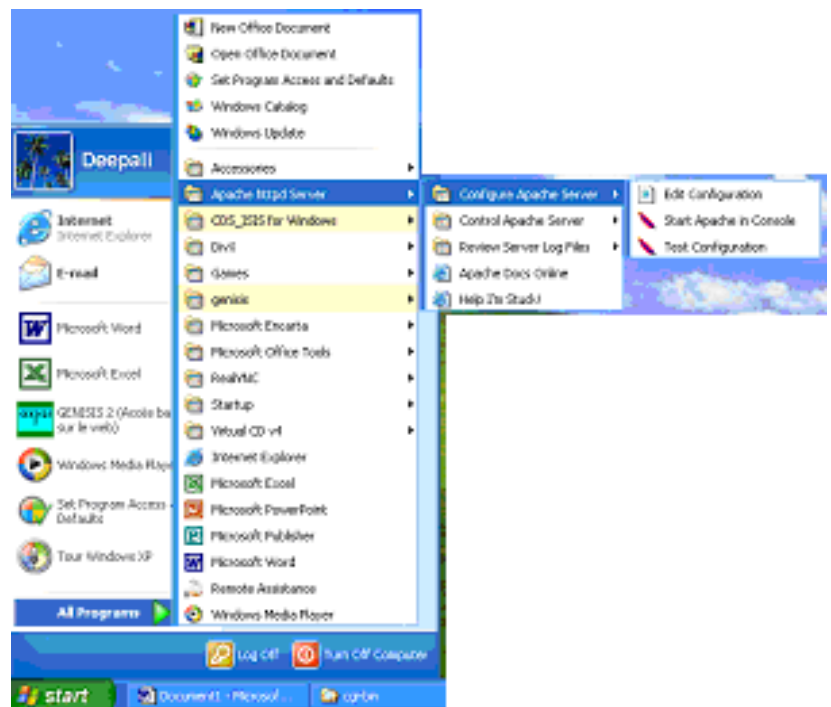

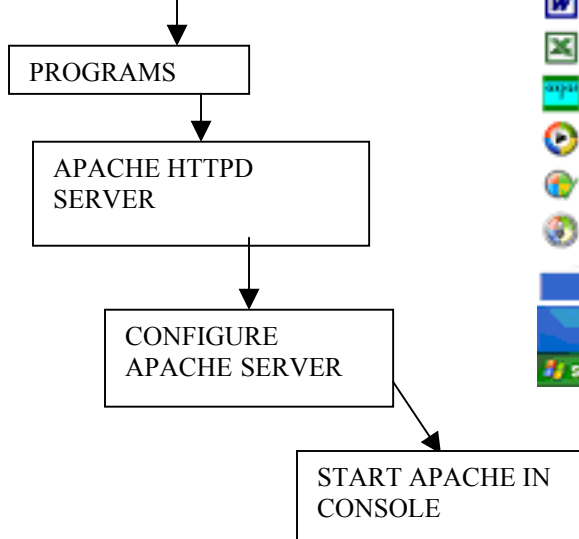

Fig. 09

When apache starts running you will get this window (Fig. 10) Then click on the minimize button.

Fig. 10

Then you can test to see if apache is running properly by opening any web browser. Open the web browser (Internet explorer/ Netscape) and type at the address bar "localhost" and you should get the following screen (Fig. 11)

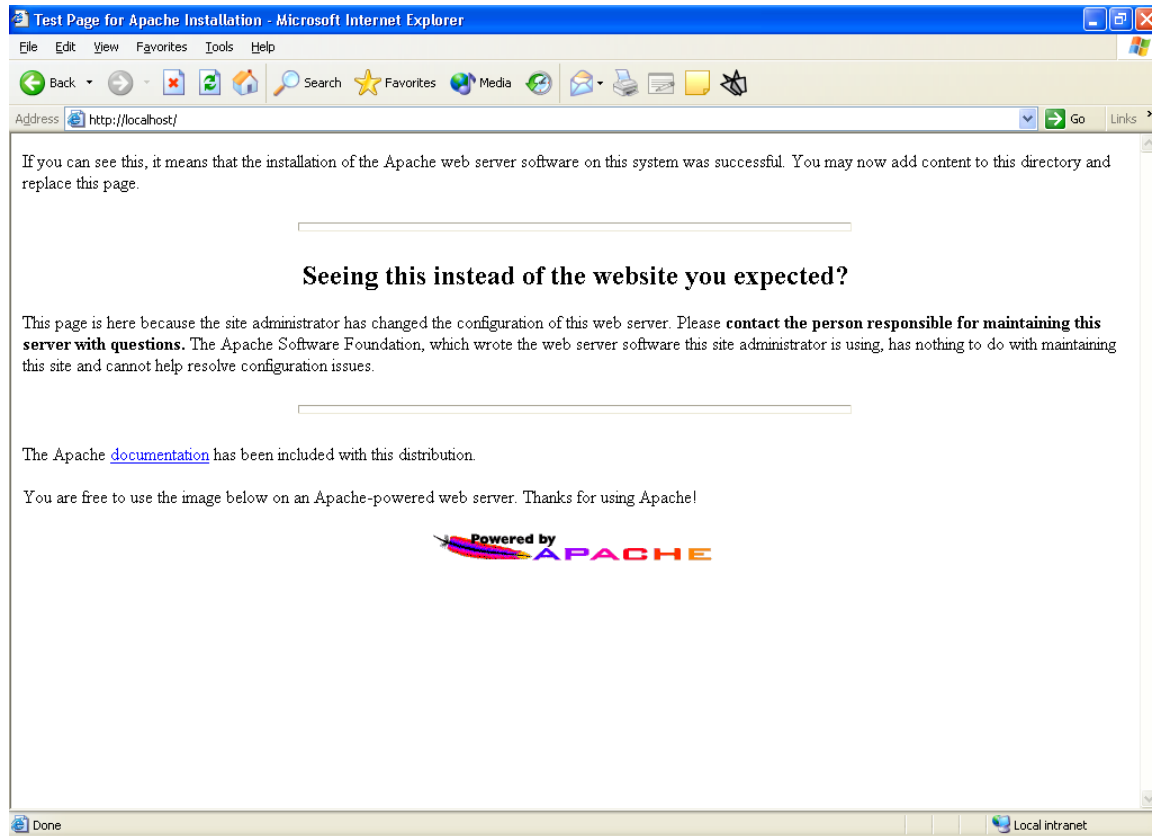

Fig. 11

Now you are ready to design your web interface.

05. Starting GenISIS

To start GenISIS follow the steps given below (Fig. 12) or you can also create a shortcut on the desktop.

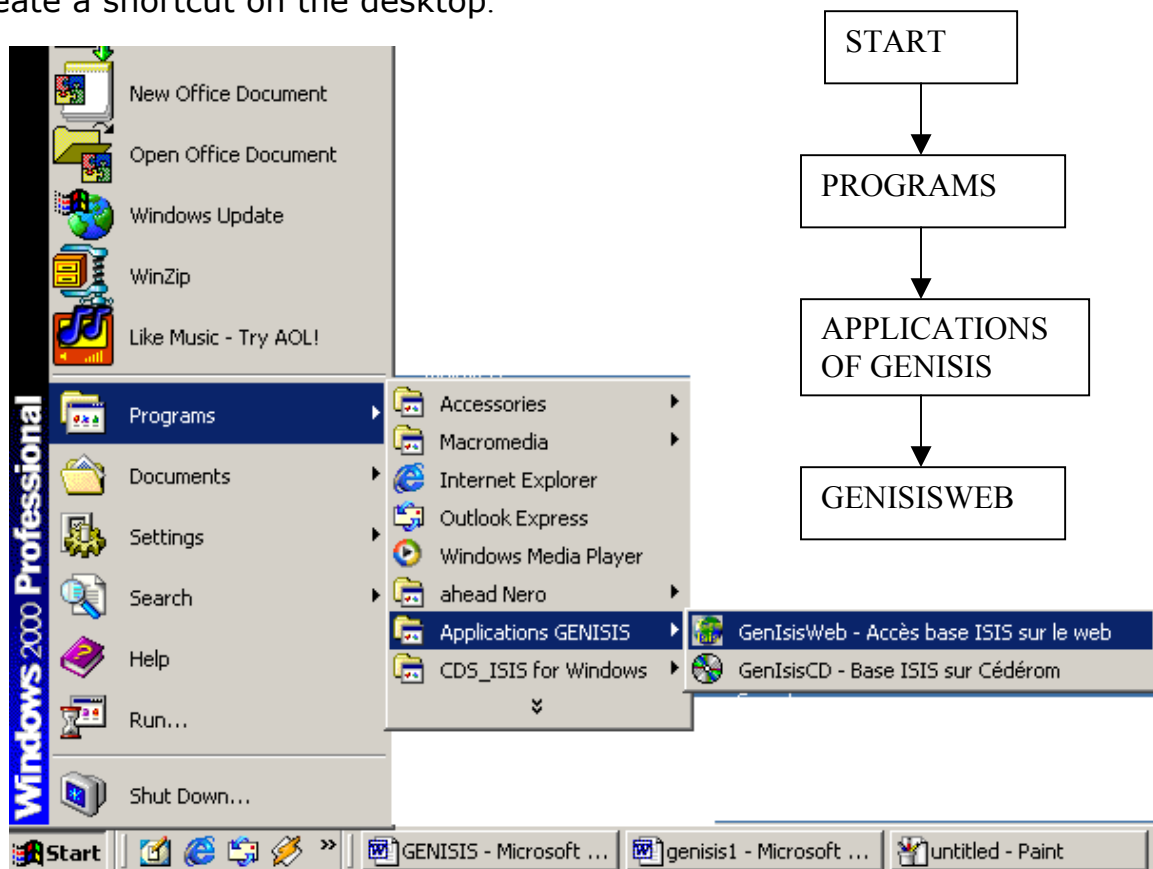

Fig. 12

Then you will get the following screen (Fig. 13). Select the option **Subfolder "wwwisis" in "DocumentRoot"**

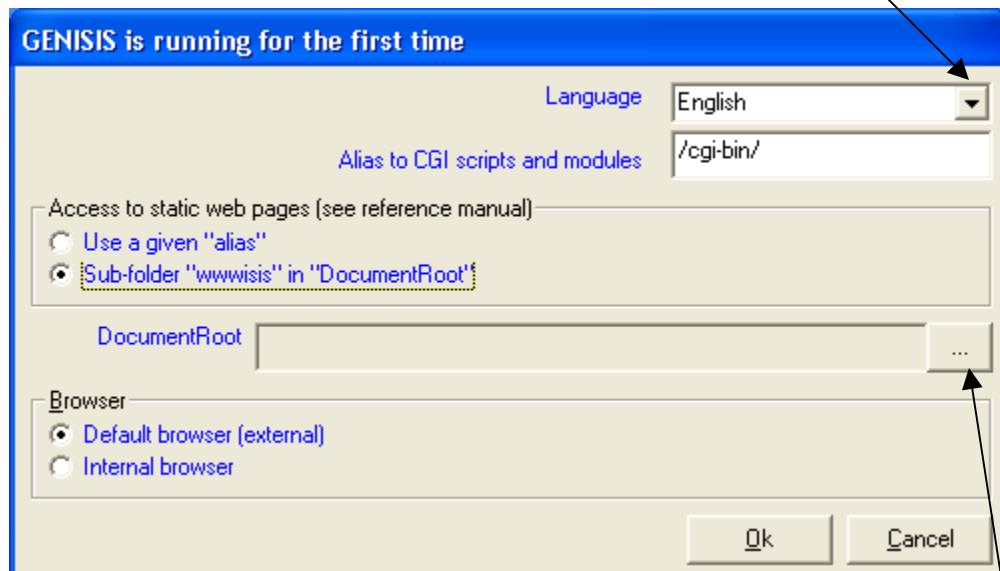

Fig 13

When you Click here you will get the dialogue box (Fig 14)

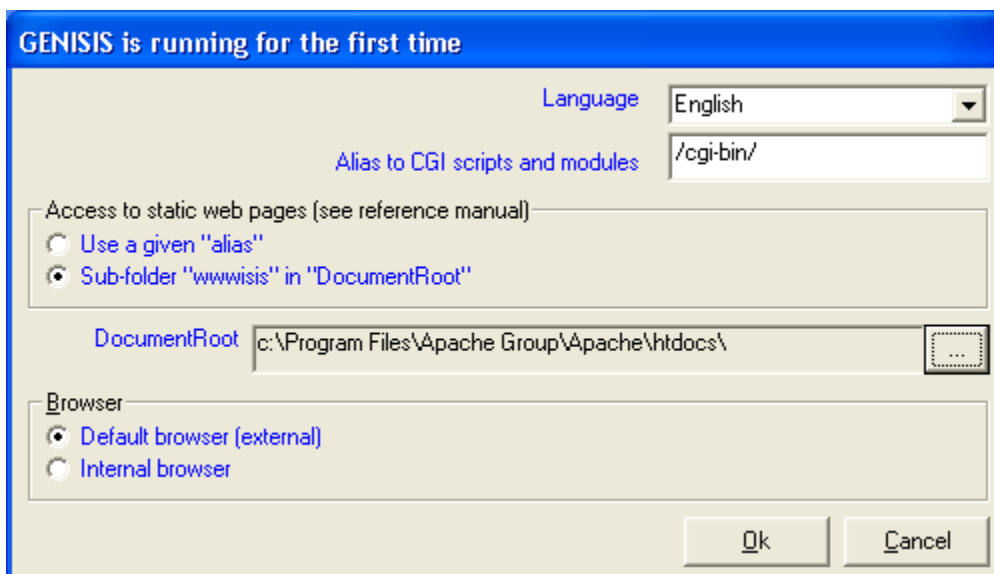

Fig 14

Then you will get this message (Fig. 15)

Fig 15

Click on YES and you will get the message (Fig. 16)

Fig. 16

Then click on **OK** and you will get this message (Fig. 17) and click on **OK** .

Fig. 17

Then you will get the following screen (Fig. 18)

Fig. 18

Click on the tab "**APPLICATION**" and you will get a dropdown menu (Fig. 19)

Fig. 19

On the dropdown menu click on "**New**" and you will get the dialog box (Fig. 20) where you have to select an existing WinISIS database.

Select the database and click OPEN.

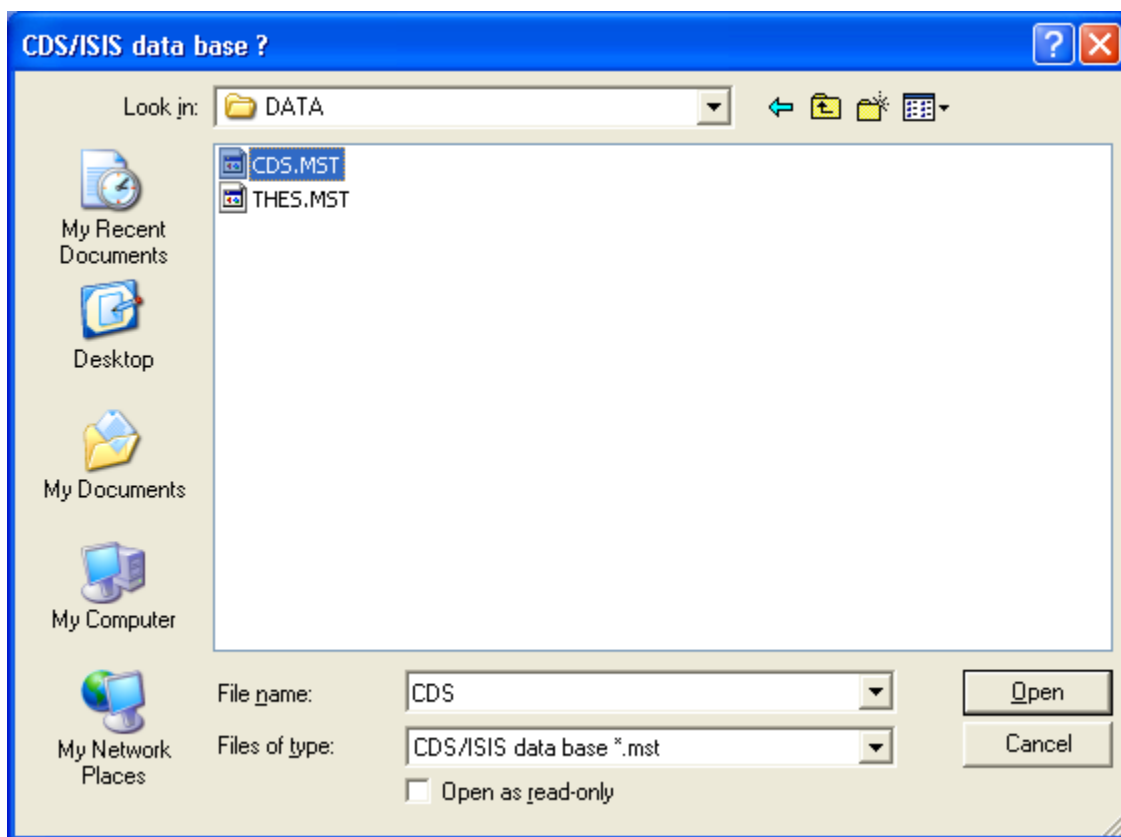

Fig. 20

When you select the database and click "**OPEN**" button, you will get the following message (Fig. 21) where you have to give a name for your application. Here you can give any name such as "**MYWEB**" and click **OK** button.

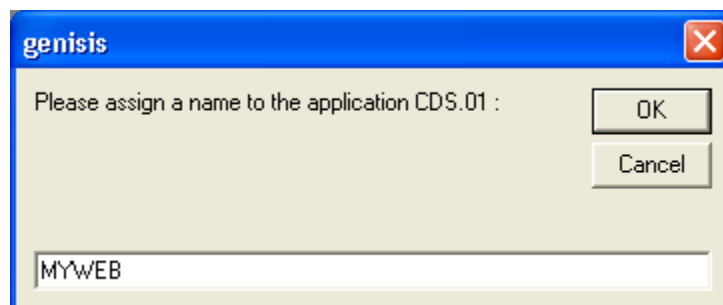

Fig. 21

Then you will get this window (Fig. 22) with three forms:

- Query form
- Format 'listing'
- Format 'details'

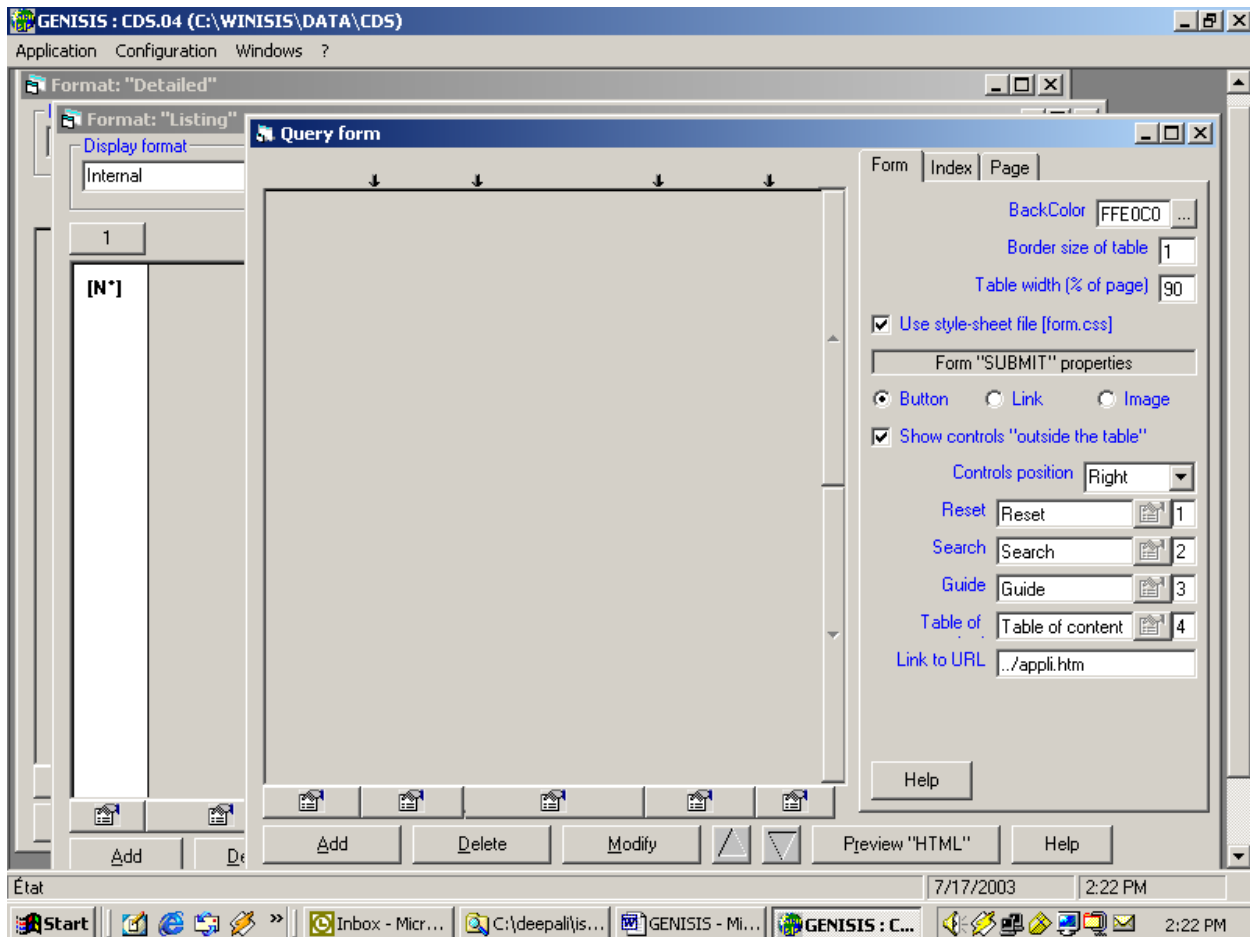

Fig. 22

Query form: allows you to design the query for with field selection and access to Indexes.

Format 'listing': allows you to design a short display format from which the users can select for the detailed display.

Format 'details': allows you to design a detailed display format.

05.01 Designing the query form

To design the query form you have to add fields. Click on “**ADD**” button at the bottom of the query form (Fig. 22). Then you will get this window (Fig. 23) titled ‘**ITEMS ON THE QUERY FORM**’. The items you see on the left panel are those indexed in your database, i.e. which are included in the FST and one field including all fields.

The screenshot shows the 'Items on the query form' dialog box. On the left, there is a list of 'Searchable fields' with '24=Title' selected. Below this list are sections for 'Default operator' (radio buttons for 'User choice', 'and', 'or'), 'Default operators among "criteria"' (radio buttons for 'User choice', 'and', 'or'), and 'Access to the index' (radio buttons for 'No access', 'Image', 'Link', 'Button'). On the right, there are input fields for 'CDS/ISIS field' (set to '24'), 'Label' (set to 'Title'), 'Link on label', 'Display in a new window' (checkbox), 'Size' (set to '400'), 'Value', 'Automatic right-truncation' (checkbox), 'Consider as one term' (checkbox), 'Multiple selection on drop-down list' (checkbox), 'List size' (set to '1'), 'Search value', 'Display value', 'Add', 'Delete', 'Top', 'Bottom', 'Load from file', 'Clear the list', 'Displayed index type' (set to 'Database dictionary'), 'Index title' (set to 'Title'), 'CDS/ISIS field to be displayed' (set to '24'), 'Label', 'Advanced mode (Alphabetical, Search)' (checked), 'Help', 'Cancel', and 'Ok' buttons. Three annotations with arrows point to the left panel: 'Fields to be selected for searching' points to the 'Searchable fields' list, 'Operators' points to the 'Default operator' section, and 'Access to index' points to the 'Access to the index' section.

Fig. 23

On the left panel below you are given options to select the operators and the access to index. Here you can select three different ways of displaying the link to index.

On the right side also you can select what ever options you would like to have. Here you can select “**AUTOMATIC TRUNCATION**” without using the \$ sign.

Once you select these options click on “OK” button and you will get this window (Fig. 24).

Note: You can select only one field at a time. If you want to select more fields you have to click on “ADD” and select another one.

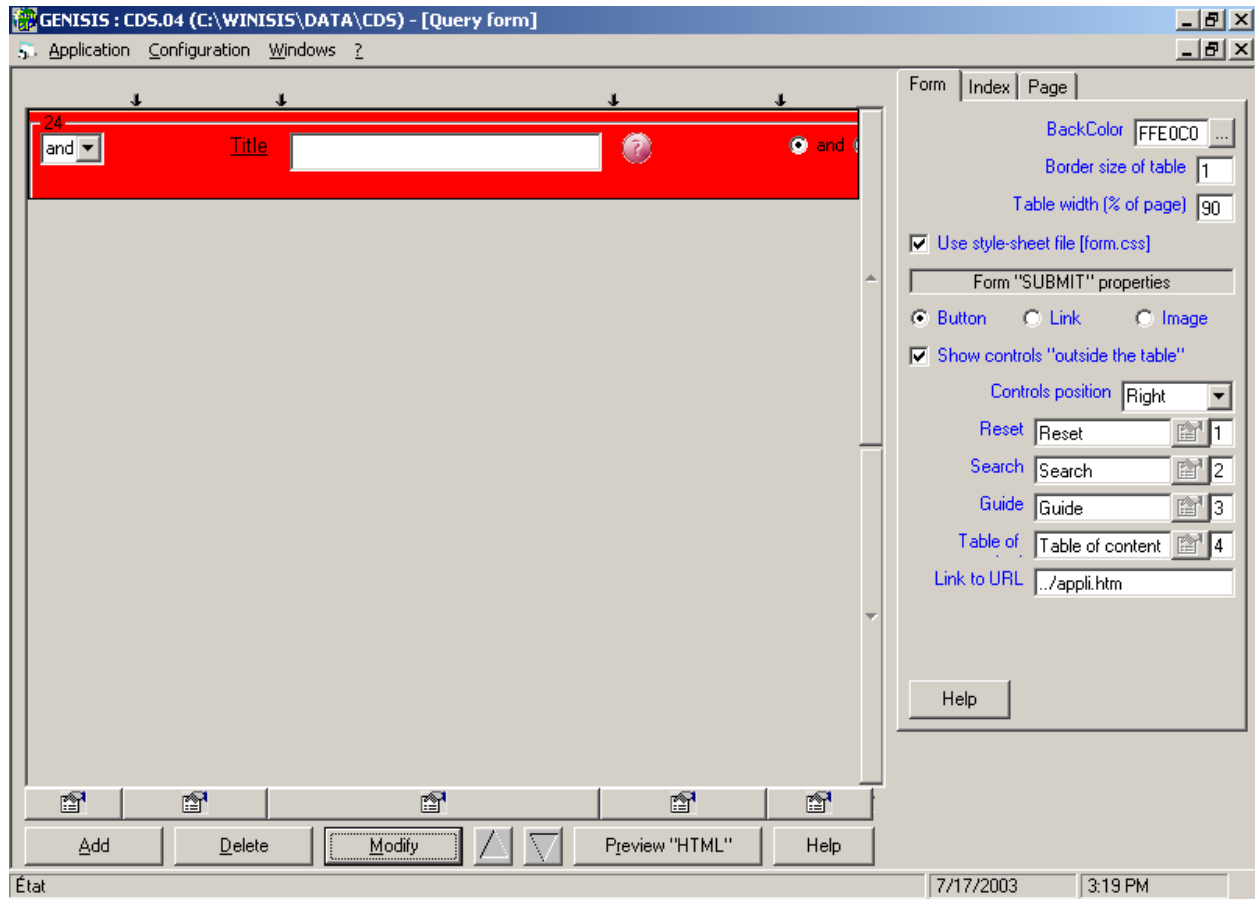

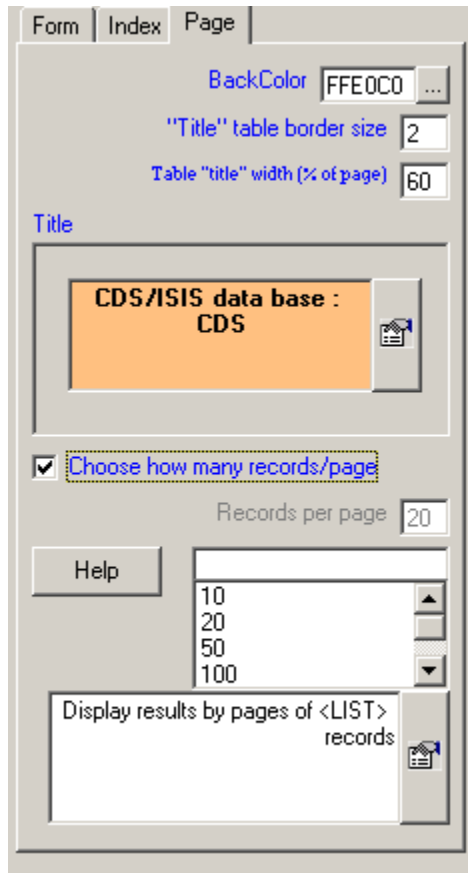

Fig. 24

There are three tabs on the right side of this window as shown below. By clicking on any of these will allow you to format these pages.

If you click on “**PAGE**” tab the right side of the window will change as given below (Fig. 25)

Here you can select how many records to be displayed after searching. You can also select the background colours.

Note: It is better to play with these options and see how they give different look to your query form and the search display. Click on this button  also and see what happens and how you can design your query form and display windows.

Fig. 25

Once you finish designing the query form you can test it. Click on **"APPLICATION"** on the menu bar and click on **"SAVE"** on the dropdown menu. Then you will get this message (Fig. 26). Click on **"OK"**

Fig. 26

Click on yes and your web browser will open automatically and the

Again click on **"APPLICATION"** on the menu bar and click on **"CREATE APPLICATION"** on the dropdown menu. You will get this message (Fig. 27).

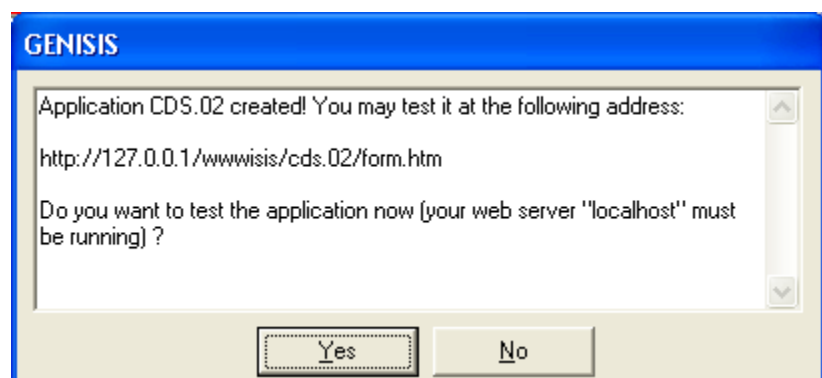

Fig. 27

query form will open in it (Fig. 28).

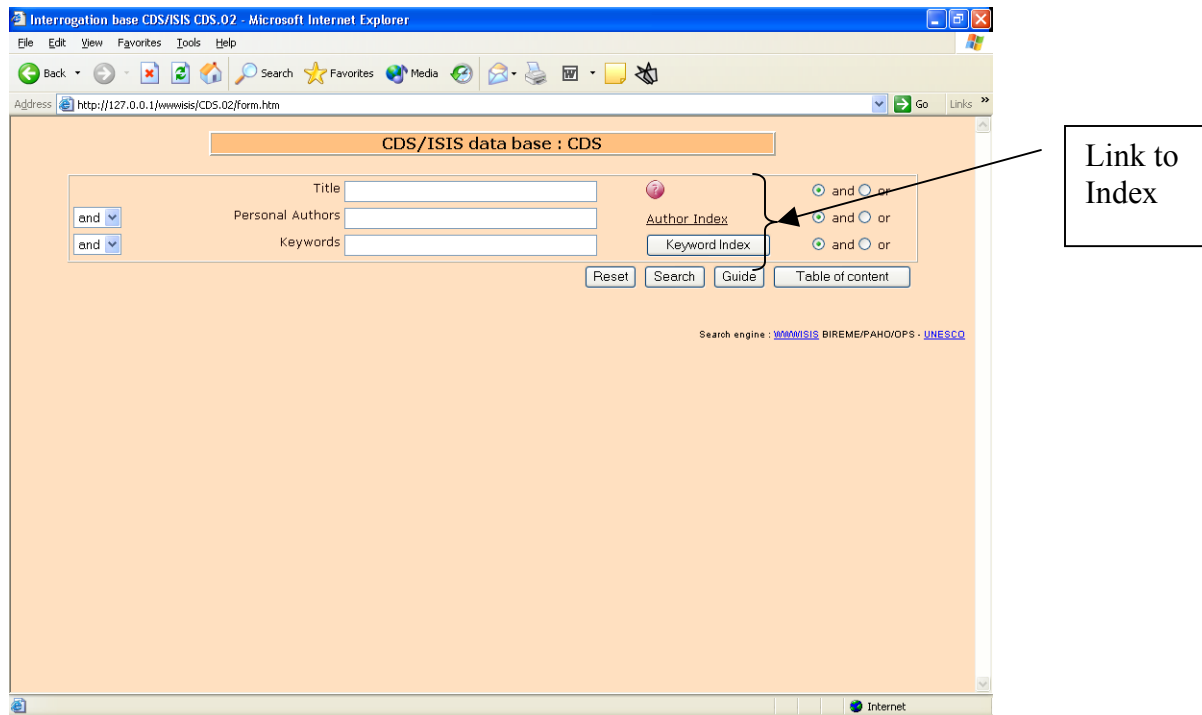

Fig. 28

Note: In Fig. 28 you can see that three types of Index linking is used

Now you can open the Index by clicking on the link to index and you select terms from the Index (Fig. 29) and click on search.

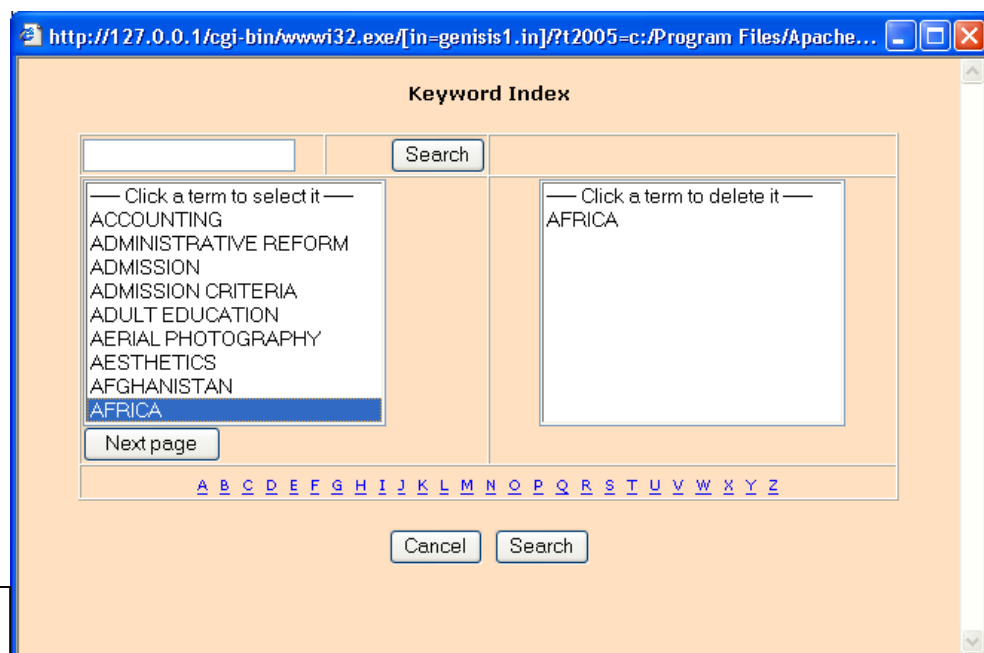

Fig. 29

You will get back to the query form and the terms you selected will be on the form.

Now click on “**SEARCH**” button. You will get the search results as shown in Fig. 30

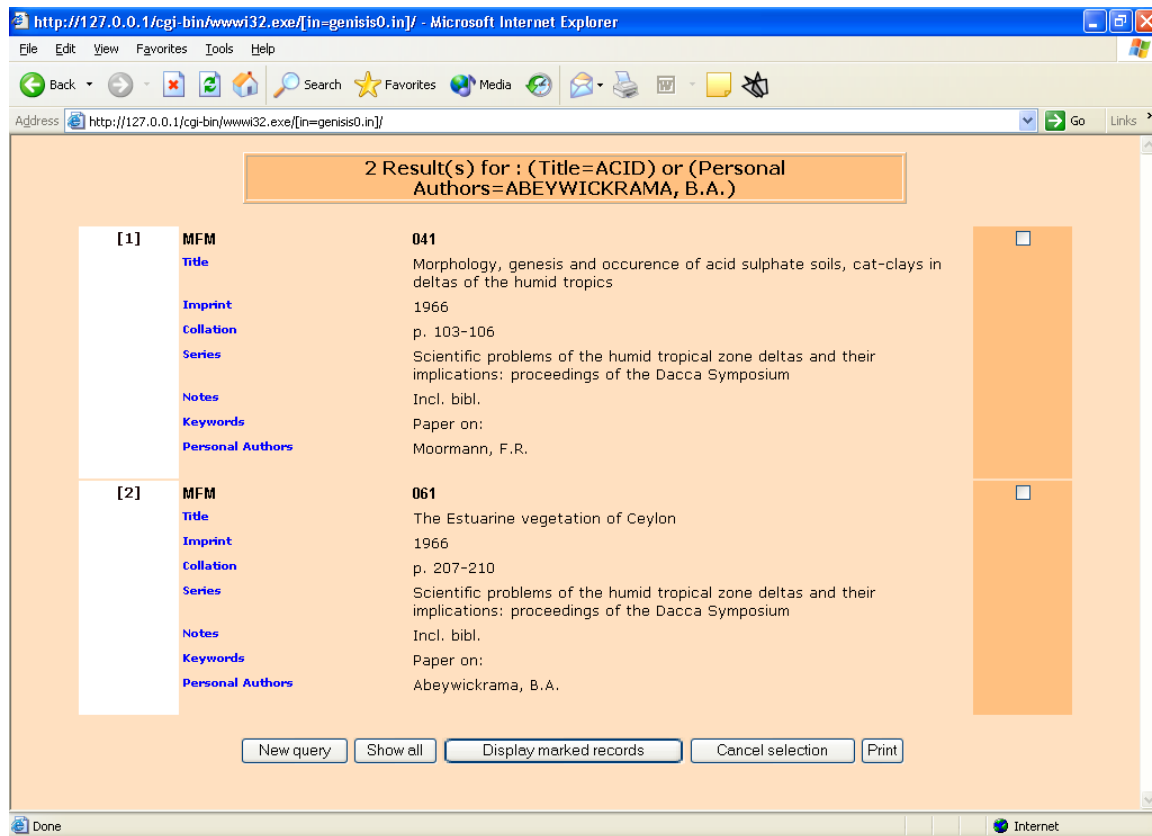

Fig. 30

Note: Remember still you have not designed the display formats. What you see in Fig. 30 is the default format.

05.02 Designing the display formats

First you have to design the short display, which will allow the users to select records for detailed display.

Click on the “Format listing” window. Then you will get the default form (Fig. 31). Click on “**ADD**” button at the bottom and you will get a form similar to a worksheet in WinISIS (Fig. 32)

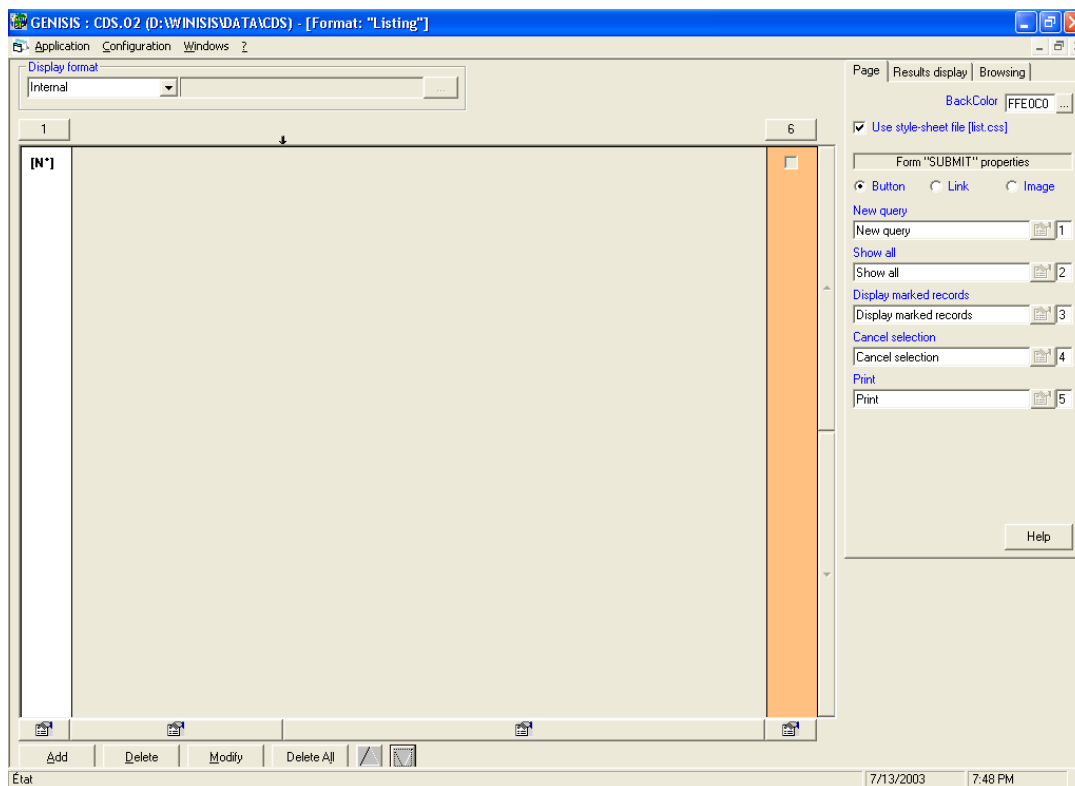

Fig. 31

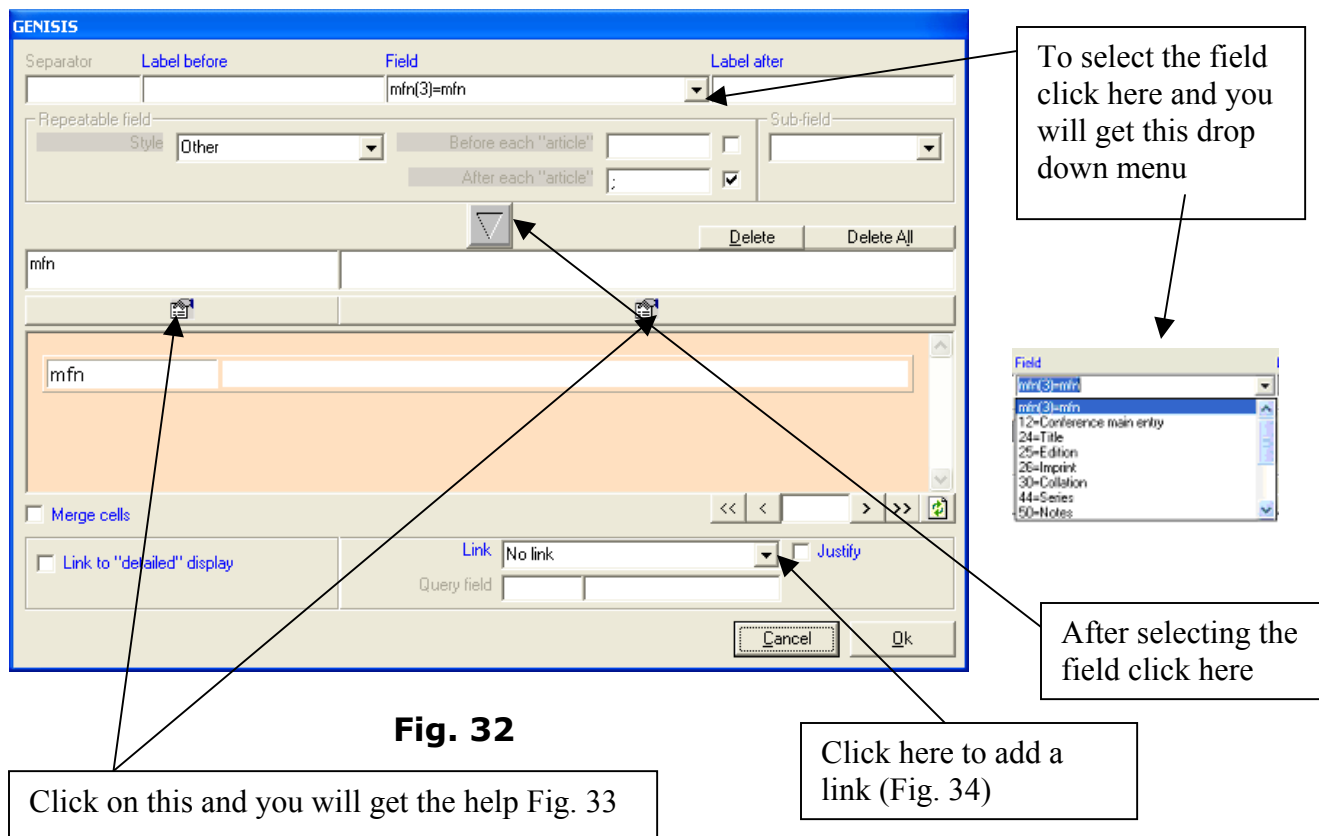

Fig. 32

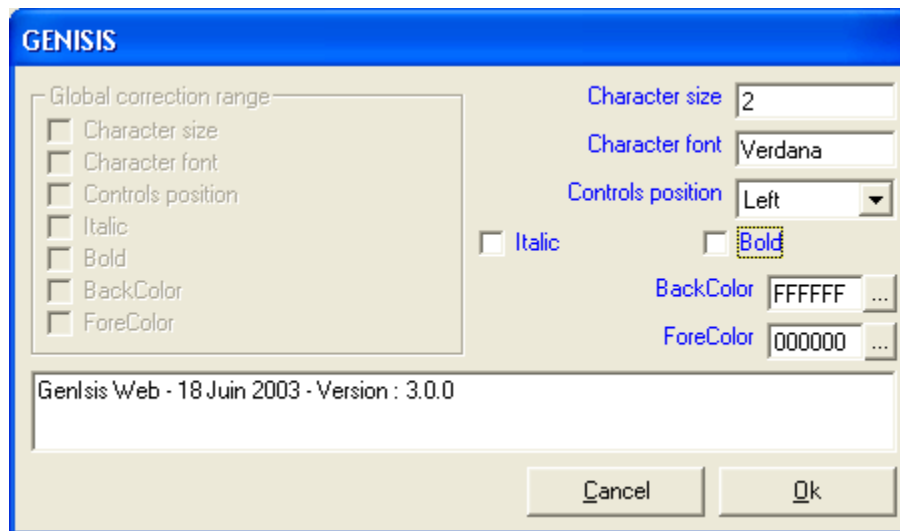

Fig. 33

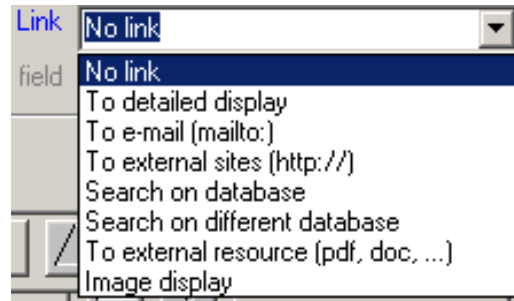

Fig. 34

You can select two or three fields to be displayed in the short display and one field should be linked to the detailed display (Fig. 34), so that the users can see the detailed display of each record by clicking on this link.

See Fig. 35 which

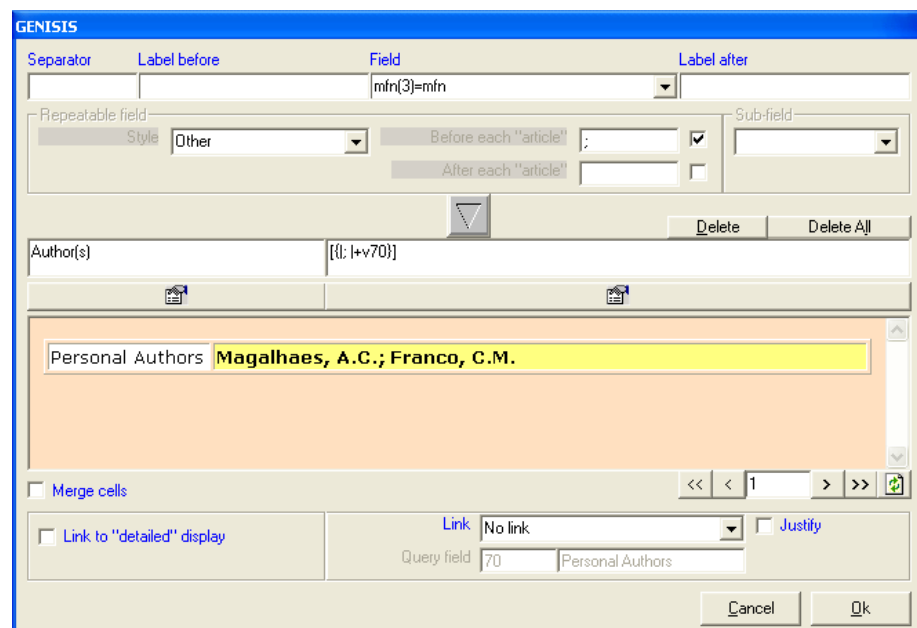

Fig 35

is after entering a field for the short display. Click on “OK” button

Note: Here also you have to add each field separately

Once you select two/ three filed for your short display (Fig. 36) you can save and create and view the web interface and search as given above under 05.01.

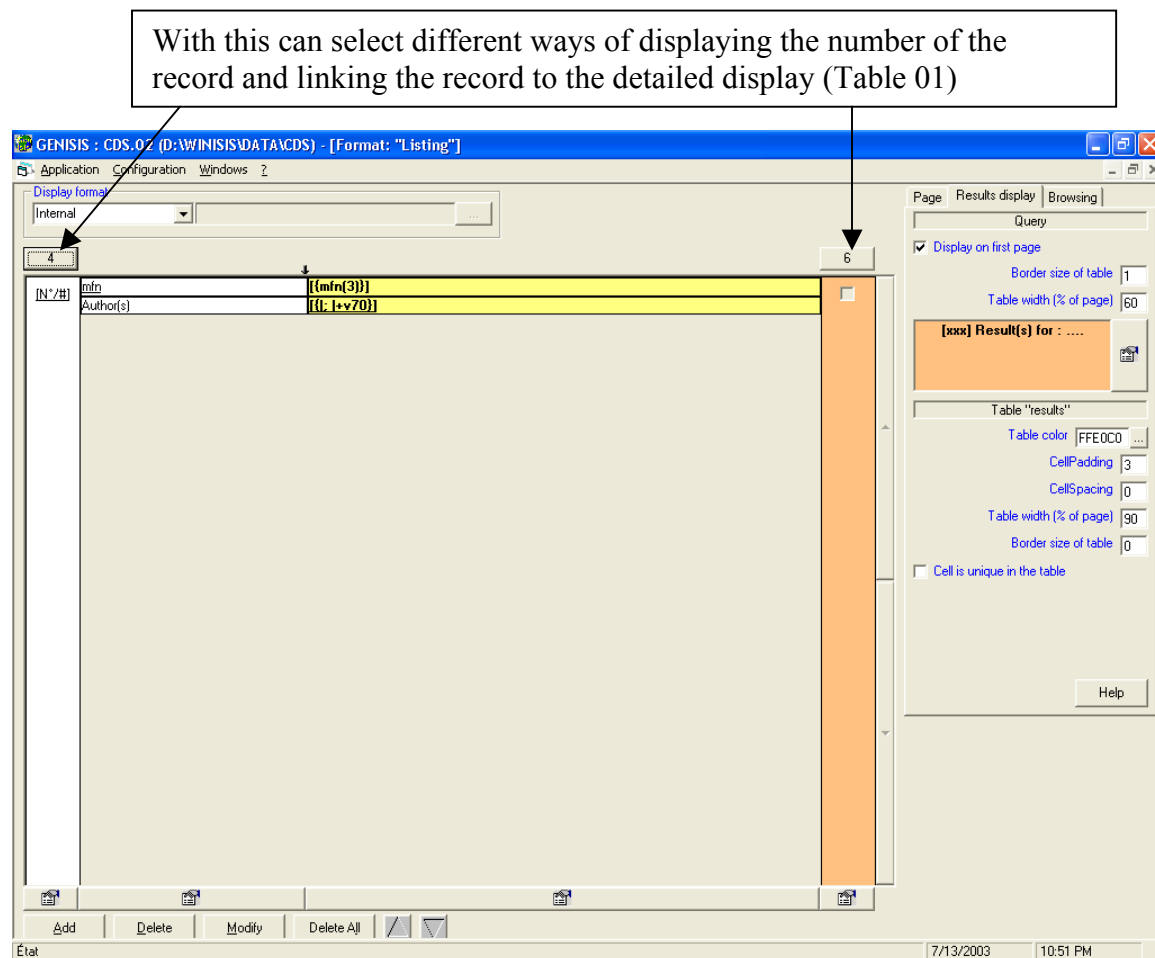

Fig. 36

1	only the number of the record
2	the number linked to the detailed record
3	[1/21] (Fig. 37)
4	Same as for 3 but the number is linked to the detailed display

	Author(s)

Fig. 39

You have to follow the same procedure to design a detailed display on the **FORMAT "DETALED"** form. Fig. 40 shows a sample detailed format form.

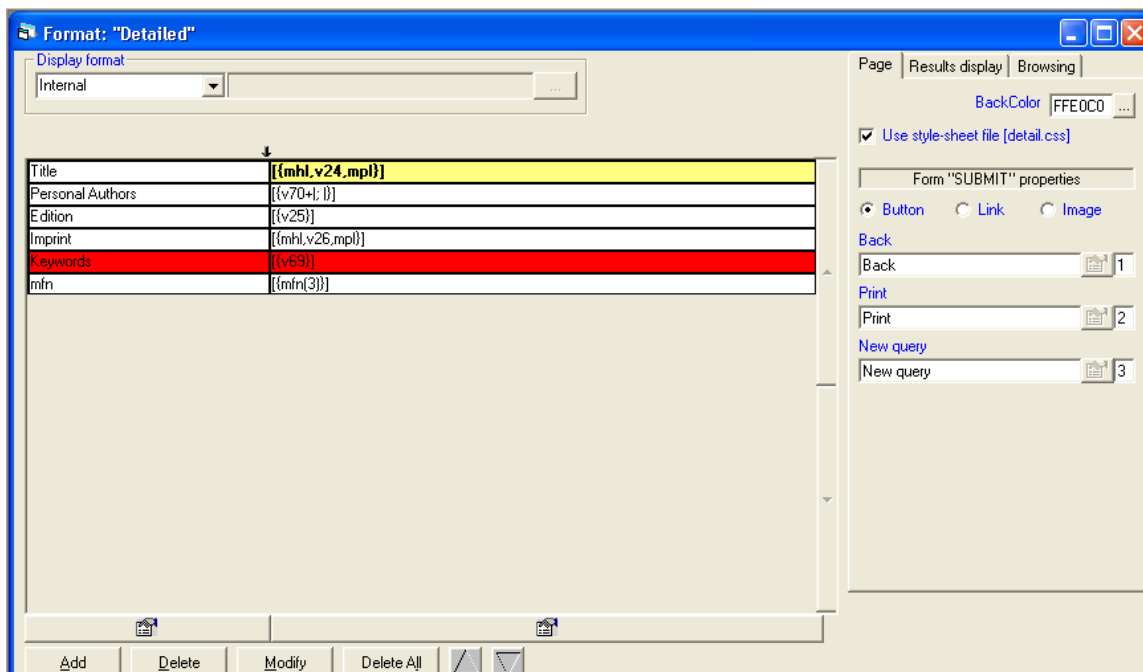

Fig. 40

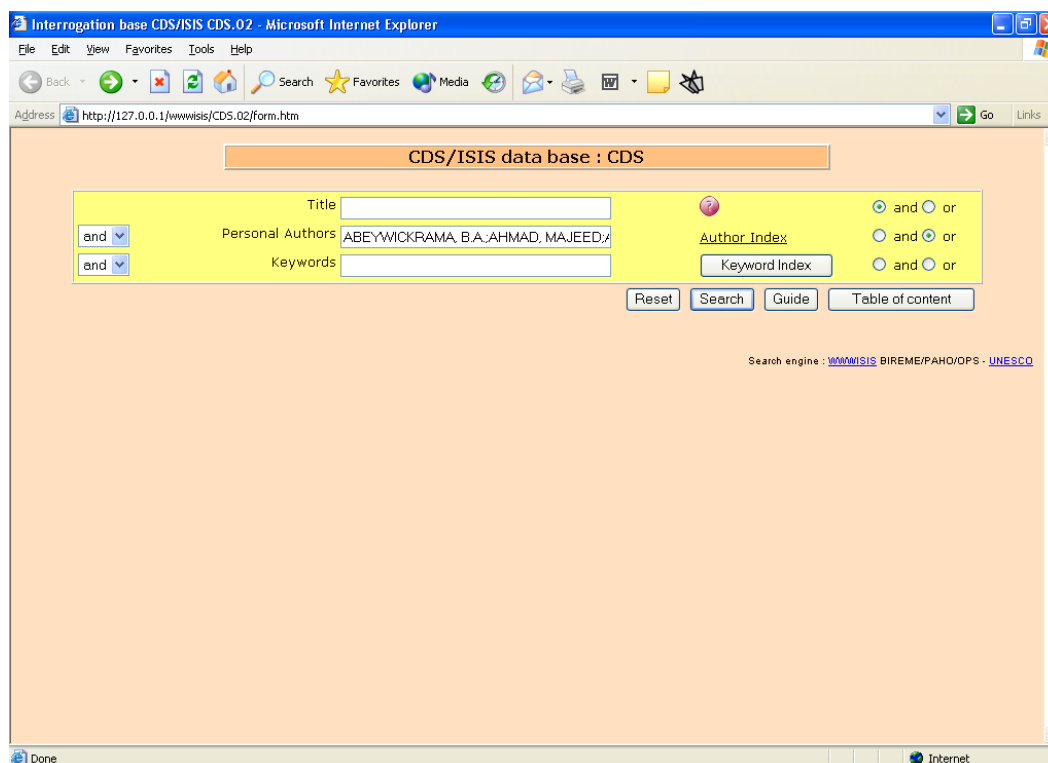

Fig. 41 – Web query form

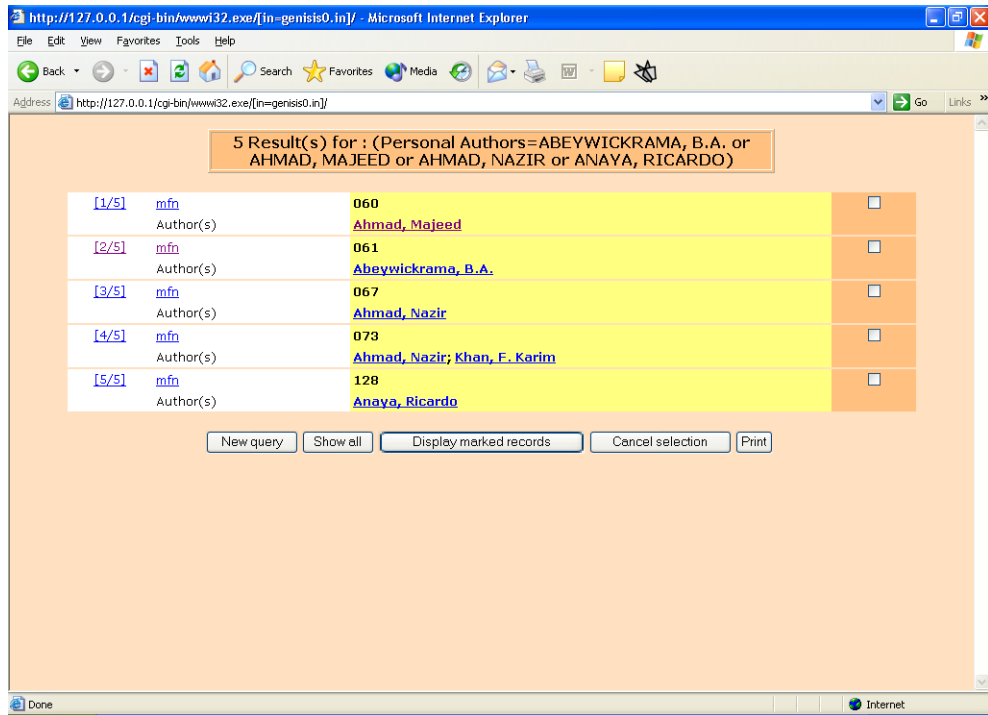

Fig. 42 – Short display on the web

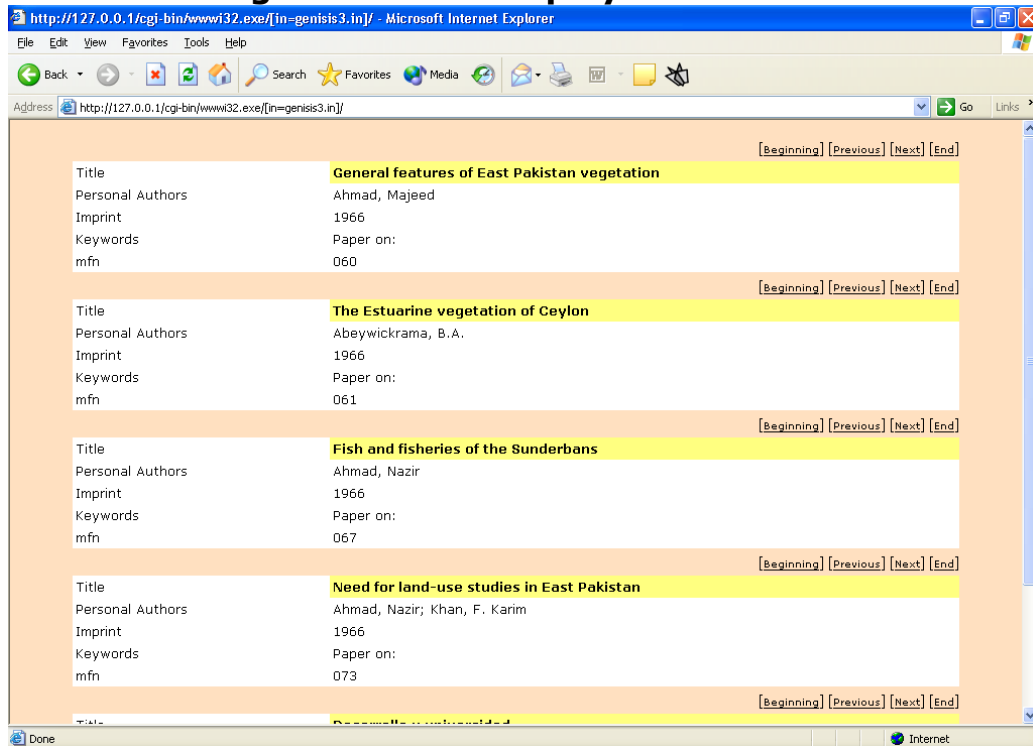

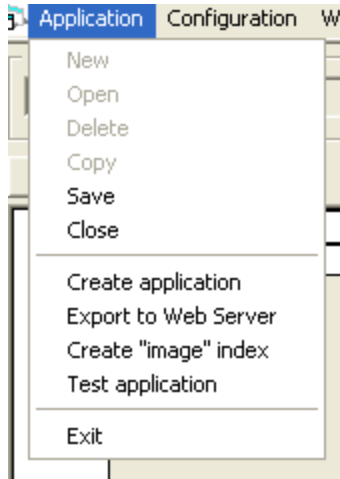

Fig. 43 – Detailed display on the web

After you design this if you are on an intranet you can allow the others to search on the database by providing your IP address. You also can export this database and web interface to a server on another computer.

05.03 Exporting to a web server

Click on the application and select export to the web server (Fig. 44).

Then you will get a dialogue box (Fig. 45 & 46)

According to the instructions given in this you have to select the path to export. You can export to a UNIX or Windows server.

Then click **OK**

Fig. 44

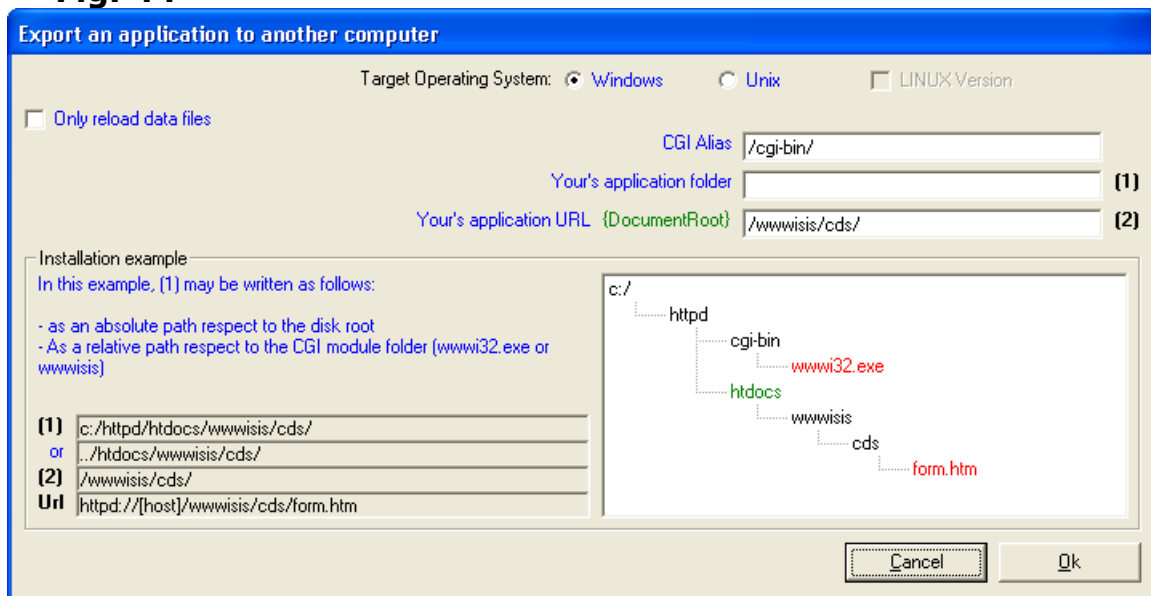

Fig. 45 (Path for Windows server)

Then you will get another dialogue box (Fig. 47), which gives all the instructions on how to copy the files to the server. Get a print out of this before closing it and follow these instructions to copy the files to the server.

Export an application to another computer

Target Operating System: ☐ Windows ☒ Unix ☒ LINUX Version

☐ Only reload data files

CGI Alias: /cgi-bin/

Your's application folder: (1)

Your's application URL: (DocumentRoot) /wwwisis/cds/ (2)

Installation example
In this example, (1) may be written as follows:

- as an absolute path respect to the disk root
- As a relative path respect to the CGI module folder (wwwi32.exe or wwwisis)

(1) /httpd/htdocs/wwwisis/cds/
or
(2) ../htdocs/wwwisis/cds/
URL http://[host]/wwwisis/cds/form.htm

Diagram illustrating the directory structure:

```

graph TD
    httpd --> cgi-bin
    httpd --> htdocs
    cgi-bin --> wwwisis
    htdocs --> wwwisis
    wwwisis --> cds
    cds --> form.htm
  
```

Cancel Ok

Fig. 46 (Path for Windows server)

GENISIS

Export completed. Now follow the instruction below to install you application to the other Operating System:

- 1
Copy the content of folder [C:\Program Files\GenIisisWeb\export] to folder [/httpd/htdocs/wwwisis/cds/] in the other computer.
- 2
Copy the content of folder [C:\Program Files\GenIisisWeb\export\cgi-bin\] to folder [CGI-BIN] in the other computer.
- 3
On UNIX, you must load the [codage] data base: go to folder [/httpd/htdocs/wwwisis/cds/gizmo] and run the shell script [load_gizmo.sh] (do not forget to give it execution rights: chmod +x load_gizmo.sh).
- 4
On UNIX, you must load the [CDS] data base: go to folder [/httpd/htdocs/wwwisis/cds/data] and run the shell script [load_data.sh] (do not forget to give it execution rights: chmod +x load_data.sh).
- 5
On UNIX, you must load the [index] data base: go to folder [/httpd/htdocs/wwwisis/cds/index] and run the shell script [load_index.sh] (do not forget to give it execution rights: chmod +x load_index.sh).

Print Exit

Fig. 47

A web interface compiled with GENISIS (previous version) is accessible online at <http://thakshana.nsf.ac.lk/wwwisis/purna/form.htm>
